

The Vaniman Accumulator, Cyclone Pre-Filter, is extremely efficient, collecting 99% of dust down to 1 micron, and is constructed of rugged molded plastic making it virtually indestructible. Originally designed for the Jewelry and Dental Laboratory Industry, the Accumulator is now being used in other major industries such as Aerospace, Pharmaceuticals, Medical Device Manufacturing, and Automated Packaging to name a few.

The Accumulator can be used in conjunction with an individual workstation dust collector or with a central dust collection system when a workstation or work area needs to be isolated to reclaim precious metal, or protect other sensitive components from dust and debris.

Part number: VMC-A100
Small Accumulator, Cyclone Pre-filter for 1-1/2
Pre-filter system for Dust Collectors, for 1-1/2" hose. Replacement
accumulator for VAN-I-VAC, VMC-V130 dust collector only.
(Sold without hose)

Part number: VMC-A300
Large Accumulator, Cyclone Pre-filter for 2-1/2
Pre-filter for dust collectors with 2-1/2" hose. (Sold without hose)

Part number: 10509
Accumulator XL, Cyclone Pre-filter for up to 4" hose
Cyclone pre-filter for dust collectors using up to 4" hose.
(Sold without hose)
