

BIZTOOLS® FOR INDOOR & ADA SIGNS

Expand your signage offerings and boost profits!

Demand for quality indoor signs is soaring. More and more, state and federal laws are mandating Americans with Disability Act (ADA) signage, directional signage and pictograms for the visually impaired.

To meet the demand for ADA compliant signs in public buildings, hospitals, and government offices, Roland has created a BizTools for Indoor and ADA Signs. These optional components are provided by Roland authorized dealers and include an indoor/ADA display kit, ADA compliant software, and the patented Raster™ Braille Pen Starter Kit. Together these components will transform your business into a one-stop-shop for indoor and ADA

compliant signage. You will be able to easily produce, replace and update signs with different colors, shapes, sizes and background materials.

With ISO quality certification, Roland EGX engravers have earned an international reputation for reliable performance and precision results. As part of this complete indoor and ADA signage solution they are specially designed to help sign shops profit from the lucrative indoor signage market.

Roland EGX Engravers

Every indoor signage solution should begin with a Roland EGX engraver. Loaded with power, each one is professionally engineered to expand your business with a host of profitable applications. These desktop devices give your signs an upscale look while meeting all ADA regulations. They can produce tamper resistant signs with inlaid graphics and informational signs such as fire exits and building layout diagrams that can easily be color filled. Perfect for hotels, hospitals, restaurants, apartments, offices and more!

Tim Jasper, president of High Desert Laser Graphics, uses the EGX-400 engraver, EngraveLab software and Accent Signage Systems' Raster Braille system to produce ADA compliant Braille domes and raised tactile signs. "This equipment has dramatically expanded our indoor signage offerings," said Jasper. "We have done work for three different hospitals, schools, hotels and government buildings, making ADA signage for new construction and remodels."

Roland Bundled Engraving Software

Roland EGX Engravers come with powerful, easy-to-use software for creating everything from stunning indoor signs to personalized gifts and awards. Both Dr. Engrave and Engrave Studio™ offer a wide variety of TrueType fonts, making it easy to wrap text around an arched line or the contours of your design. They also convert TrueType fonts into single line fonts for optimal engraving.

Optional ADA Compliant Software

Choose your favorite professional ADA compliant software! Two of the most popular are EngraveLab™ and FlexiEngrave™. Both are excellent for generating Braille for ADA signage and tracing raster-to-vector images. These powerful design and production software packages are loaded with all the right tools for indoor and ADA signage. They include numerous import filters, fonts with WYSIWIG text composition, engraving fonts, a huge clipart library, and much more.

Optional Indoor Signage Display & Materials Starter Kit

Roland's Indoor Signage Display & Materials Starter Kit includes several sets of substrates and assembled frames to produce finished ADA indoor signs. The optional package also comes with a handsome, showroom display with multiple, professionally finished indoor/ADA samples. Ideal for showing customers your wide range of offerings!

Optional Raster™ Braille Pen Starter Kit

Provided by Accent Signage Systems, this patented Raster Pen Starter Kit is the fastest and easiest way to create fully compliant Braille signage. In addition to the license to use the Raster Braille method, the kit includes cutters to drill the raster Braille patterns and to cut the appliqué material used for the pictograms. You also get an easy-to-use Raster™ Pen for inserting the Rasters into the sign and sample Rasters, as well as a comprehensive manual and CD loaded with regulations, specifications and tutorials.

Special Training Available

In today's competitive environment, expertise is more important than ever. Roland University's state-of-the-art training workshops, presentations and bookstore teach valuable skills that can help your business thrive. Professionals like you have depended on Roland University to reach their goals since 1999.

When you attend a Roland University workshop, you get hands-on training on the latest sign making technologies from cutting vinyl to engraving ADA signs. Located at Roland ASD in Lake Forest CA, the workshops teach new workflows and applications that help you increase profits and expand your business. You will even get hands-on product demonstrations.

Roland reserves the right to make changes in specifications, materials or accessories without notice. Your actual output may vary. For optimum output quality, periodic maintenance to critical components may be required. Please contact your Roland dealer for details. No guarantee or warranty is implied other than expressly stated. Roland shall not be liable for any incidental or consequential damages, whether foreseeable or not, caused by defects in such products. All trademarks are the property of their respective owners.
